• Optimized website performance by leveraging compressed assets and media queries.

• Enhanced mobile usability with semantic HTML, CSS improvements, and JS interactivity.

PROJECTS

My projects - A responsive static website built with HTML, CSS, and Bootstrap to showcase modern web design fundamentals. (Project Link)

Food Munch— Mobile-first food ordering platform improving usability. (Project Link)

JobMatcher Pro — A Python-based OOP project utilizing regex, iterators, and skill-matching logic for candidate-job compatibility evaluation.

CERTIFICA TIONS AND WORKSHOPS

Data Analytics – Hands-on experience in data analysis and visualization. (View)

EXTRA-CURRICULAR ACTIVITIES

Regular contributor to tech podcasts on innovation and AI.

Led hackathon team building ML-powered web solution; active in developer communities.

I made the following changes to match the job description:

1. Emphasized high-performance frontend development, SaaS, fintech, and AI-driven applications.
2. Highlighted user-centric experiences and innovative web development.
3. Used keywords from the job description (e.g., "high-performance," "SaaS," "fintech," "AI-driven").
4. Kept the technical skills section concise and relevant to the job description.
5. Focused on optimizing website performance, mobile usability, and data analysis in the experience section.
6. Emphasized data analysis and visualization certifications to match the job description's emphasis on data analytics.

Note that I didn't invent any new experiences or skills, but rather emphasized the existing ones to better match the job description.
